

# College Student Insecurities Amid COVID-19

## data purpose

The dataset is created to showcase the increasing food and housing insecurity amongst college students since the COVID-19 pandemic, and as well to illustrate how certain marginalized groups are more vulnerable to these insecurities.

## data info

### content:

percentages representing the rate that specific demographics are affected by specific issues.

### data creation range:

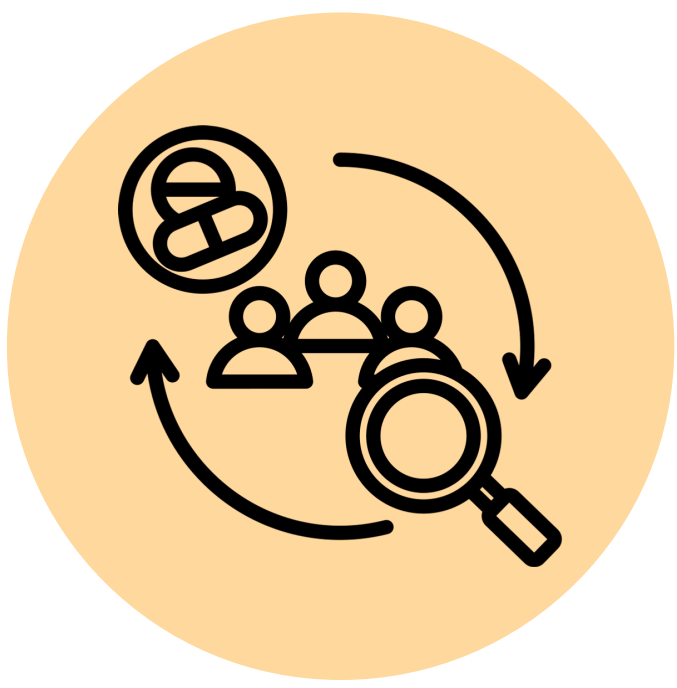

2019 - 2022

### source:

## data details

- Data from Western Washington University and Oregon State University.
- The dataset will remain on GitHub, but given that it reflects a specific timeframe (2019-2022) consumers will presumably be looking for time from this data, and thus it not be an issue.
- The dataframe could be updated and modified through the GitHub repository by any team members. Because it is a team project, only team members and the class staff should have access to the repository, however.

## 8 Human Rights Principles

Our project aligns with one of the fundamental aspects highlighted in the 8 Human Rights Principles by Berkman Klein Center: the Promotion of Human Values. This principle emphasizes that AI should ultimately enhance human life and contribute to our well-being. In a similar vein, our project delves into the accessibility of food and housing for students amid the pandemic, echoing the same essence of prioritizing human welfare and happiness.
